Cincinnati Bell Inc. — More than Just a Phone Company

Buy

- We have initiated coverage of Cincinnati Bell Inc. (CSN) with a Buy rating. CSN, which has traditionally been a local phone company, now earns nearly half of its operating income from its faster growth billing and teleservices companies (Cincinnati Bell Information Systems and MATRIXX Marketing Inc.).
- We expect CSN to benefit as its faster-growth customer care businesses contribute an increasing percentage of earnings, and as the phone company manages its expected market share losses caused by the deregulation in its market. We expect both CBIS and MATRIXX to continue to post strong growth as they take advantage of the secular trend toward outsourcing and as they benefit from the greater emphasis on marketing and customer service in the increasingly deregulated communications marketplace.
- While CSN is no longer the undiscovered value that it was a few years ago, we believe it remains an undervalued asset which offers the potential for significant upside over the next 12-18 months.

SUMMARY AND INVESTMENT CONCLUSION

Initiated coverage with a buy rating

We have initiated coverage of Cincinnati Bell Inc. (CSN) with a rating of Buy. Despite its name, CSN is actually a blend between a computer services company and a phone company. While the company still earns roughly half of its revenues and operating income from the local telephone company serving the Greater Cincinnati area (Cincinnati Bell Telephone — CBT), it also consists of two significantly faster growth companies, namely a leading third-party provider of customer-care and billing solutions to the worldwide communications industry (Cincinnati Bell Information Systems — CBIS), and a leading teleservices company (MATRIXX Marketing Inc.).

We expect CSN to benefit as its faster growth billing and teleservices companies (CBIS, MATRIXX) contribute an increasing percentage of the overall company's earnings, and as the phone company manages its market share losses caused by the deregulation of its market. The underlying trend driving the strong growth at CSN's customer care businesses is a greater emphasis on marketing and customer service in the increasingly deregulated communications marketplace. We expect CSN's EPS to increase from an estimated \$1.47 in 1997 to \$1.60 (+9%) in 1998 and to \$1.95 (+22%) in 1999, with the disparate growth rates caused by heavy Year 2000 expenditures and mandated telecom costs in 1998. Before these items, we expect growth of 17% in 1998 and 11% in 1999.

We believe the stock offers value.

While Cincinnati Bell is no longer the undiscovered value that it was a few years ago, we believe it remains an undervalued asset. Based on our sum of the parts analysis, we believe the stock could be worth \$36 over the next 12-18 months.

BUSINESS OVERVIEW

In 1983, in anticipation of future competition in its core local telephone business, Cincinnati Bell decided to expand its operations to both diversify itself into higher growth, less regulated areas and to enter businesses that it believed would benefit from the anticipated deregulation of the telecommunications market. In conjunction with that decision, CSN split its data processing unit into a separate business unit and began offering data processing services to other companies. A few years later, CSN entered the teleservices industry through a series of acquisitions. Both of these businesses benefit from the growing trend among higher growth communications companies to outsource these customer-care functions. The businesses also leverage the expertise that they have developed while providing these services to CSN's own telecommunications company, Cincinnati Bell Telephone.

CSN's customer care businesses represent more than 50% of its revenues and nearly half of its operating income.

The decision has paid off as both businesses have grown rapidly over the last several years and now account for about 53% of consolidated revenues and 46% of total operating income. Communications Services makes up the remainder of the revenues and operating income, with the company's flagship unit, Cincinnati Bell Telephone, accounting for about 37% of consolidated revenues and operating income (see Figure 2). Other businesses within Communications Services include: Cincinnati Bell Long Distance (CBLD), which resells long distance services and products as well as voice mail and paging services; Cincinnati Bell Directory Inc. (CBD), which provides Yellow Pages and other directory products and services, as well as information and advertising services; and Cincinnati Bell Supply

(CBS), which markets computer and telecommunications equipment. CSN also owns a 45% stake in a cellular partnership which provides services in much of central and southern Ohio, including the Greater Cincinnati area, and was the successful bidder for a 10mhz license to offer PCS service in the Greater Cincinnati area.

CINCINNATI BELL INFORMATION SYSTEMS . INCREASED COMPETITION IN COMMUNICATIONS INDUSTRY DRIVES STRONG GROWTH

We expect Cincinnati Bell Information Systems (CBIS) to account for 28% of consolidated 1997 estimated revenues and 32% of total estimated operating income. CBIS is the largest provider of billing and customer care services to the communications industry (See Figure 3).

Figure 3. Comparison of Publicly Traded Third-Party Billing Companies (Dollars in Millions)

aLTM ended September 1997.

Sources: Company Reports and Salomon Brothers Inc estimates.

Huge Market In Which Competition and Complexity Drive Outsourcing Based on an independent third-party study, CBIS estimates that the total U.S. market for billing and customer-care services used by the communications industry was at least \$6 billion in 1996. This figure includes the estimated cost of customer-care and billing services used by wireline (about 75% of total), wireless (15-20% of the total), and cable television (roughly 10% of the total) providers, including the in-house portion.

As communications markets worldwide are deregulated and become more competitive, marketing and customer service are becoming much more important. With these changes, advanced information systems designed to be flexible, scaleable and with customer service as a focus have become critical to success. The complexity required of these systems increases even more significantly as the lure of convergence drives many participants in the communications industry to expand outside their traditional markets, creating situations in which they offer multiple services (for example, wireless, land-line telephony, cable) in multiple geographic locations. CBIS has developed, or acquired, a broad range of systems to meet these increasingly sophisticated needs and to provide its clients with a competitive advantage.

CBIS generally provides these services in a service bureau environment (roughly 60% of CBIS's revenues) where its experience providing billing and customer-care services results in significant cost and service advantages for its clients. These advantages include predictable service costs, information management expertise, and access to an advanced billing system without diverting key capital and personnel away from the client's core business and technology development efforts. We believe these advantages will continue to drive outsourcing, and therefore CBIS, for years to come.

Particularly Leveraged to the Growth in the North American Wireless industry

CBIS's particular focus is on providing billing solutions to the wireless telecommunications market in North America (including both cellular and personal communications services (PCS)). It earned approximately \$315 million (66% of revenues) from cellular clients in 1996, up 23% from \$257 million (69% of revenues) in 1995. These figures include revenues from its regular service bureau billing services as well as from various consulting and programming projects for wireless clients.

CBIS has been a direct beneficiary of the rapid growth in wireless subscribers as its regular monthly service bureau fees are typically tied to the number of bills produced for its client's subscribers each month. Management has also indicated that consulting/programming work also tends to increase as its clients grow. The number of wireless subscribers (including cellular, PCS and other forms, but with the vast majority being cellular) in the United States has grown more than 25% per year over the last several years (see Figure 4). While many industry experts expect wireless subscriber growth to slow from its current levels, growth is expected to remain in the high-teens to low twenties through 1999 as the mass rollout of PCS is expected to offset at least a portion of the slowdown in traditional cellular service.

Figure 4. U.S. Wireless Subscriber Growth, June 1990-June 1997

	1990	1991	1992	1993	1994	1995	1996	1997
Subscribers (000s) Yr./Yr. Growth	4,369 62.3%	6,380 46.0%	8,893 39.4%	13,067 46.9%	19,283 47.6%	,	38,195 35.7%	48,706 27.5%

Source: Cellular Telecommunications industry Association.

We expect CBIS to continue to benefit from the growth in wireless subscribers as it provides billing services for approximately 30% of cellular subscribers and includes many of the top cellular carriers among its clients, including AT&T Wireless, 360° Communications and Ameritech. CBIS should also be well positioned to benefit from the rollout of PCS as it has signed contracts to provide billing services to the three largest potential providers of PCS in the United States. In total, these clients (Sprint PCS, AT&T Wireless, and PrimeCo Personal Communications, L.P.) cover more than 2/3 of the potential subscribers for PCS's largest, regional-market licenses (that is, A and B licenses).

Expansion Into New Service Areas Provides Opportunity for Future Growth

While we believe CBIS's primary growth driver over the next few years will continue to be providing billing services to domestic wireless service providers, it also has service offerings for both wireline and cable providers, as well as for the emerging convergence marketplace. Furthermore, CBIS has been using acquisitions to expand internationally.

Salomon Brothers

CBIS's U.S. wireline billing solution provides it with the ability to compete for business in the largest potential segment of the billing market (the local and long distance market), but where outsourcing is still relatively limited. The company currently only provides outsourced billing services to Cincinnati Bell Telephone, but it does do a significant amount of consulting and programming work for wireline carriers such as AT&T. It has also signed a new outsourcing agreement to support AT&T's proposed re-entry into the local phone market. While AT&T has done little in the area to date and is currently re-evaluating its strategy, it is a major player in the marketplace and offers a good endorsement for CBIS's services.

CBIS believes that its best opportunity for new billing contracts within the U.S. wireline market is with the new competitive local exchange carriers (CLECs). As the local telephone markets are deregulated and attract new entrants, CBIS believes that most CLECs will focus their limited resources on providing core telephone services, rather than on developing billing systems. The RBOCs and other established local and long distance phone companies are also potential candidates, but will be more difficult to sign given their scale and the level of investment they have already made in their current systems. CBIS expects the majority of the opportunities within the RBOC segment of the market to be for systems integration work, rather than new system installations.

We also believe CBIS has significant opportunity for growth internationally. Currently, only about 10% of CBIS's revenues are from outside the U.S. with the primary sources being IT consulting engagements within the telecommunications sector (predominately for wireline providers) and license revenues from cable billing software, along with a small percentage of licensed wireline business. CBIS is, however, increasing its focus on the international arena and believes it can be a significant contributor to future growth, particularly as it leverages its expertise in wireless billing.

CBIS is also the third largest provider of billing systems for the cable marketplace in the United States. Its clients include Time Warner, Comcast and Cox Communications. It has been steadily increasing its market share of subscribers, predominately by gaining additional subscribers from current clients, but has also signed some new clients. CBIS estimates its current U.S. market share at about 17% and expects that share to be about 20% by the end of the year based on already committed new business (again mostly from existing clients). Unlike most of CBIS's systems, its cable systems are predominately sold on a license basis and run by the client on its own systems, rather than in a service bureau environment. CBIS has, however, introduced a service bureau alternative and now has a few clients running on the new system. Over time, CBIS hopes to divert clients to the service bureau solution to increase its percentage of recurring revenues.

Data Processing Drives Growth Into The Next Century

We expect CBIS's revenues to grow about 15% in 1998 to \$627 million and 15% in 1999 to \$721 million.

Data processing revenues currently account for approximately 60% of CBIS's revenues and are expected to grow in the mid- to high-teens over the next few years. Excluding new client signings, revenue growth is expected to lag behind overall wireless industry subscriber growth (expected to be in the high-teens to low-twenties) as CBIS typically passes on some of the benefits from declining processing costs to its clients in exchange for longer term contracts.

MATRIXX Clients
